

TIME SHIFTING RECORDING SWITCH WHEN PHONE CALLING

ABSTRACT OF THE INVENTION

The invention takes the advantage of features such as TiVo Digital Video Recorders (DVRs) or Replay TV DVRs, which provide continuous recording of broadcasting programs and allow users to replay any missed portions of the program. The invention records the date and time of incoming/outgoing communication events, such as phone calls, as well as the current channel number being viewed. With reference to the recorded date, time and channel number, it allows users to choose between continuing viewing the current program or going back to view the entire program starting from the missed portions due to one or more incoming/outgoing calls.
